

ABSTRACT OF THE DISCLOSURE

Various appliance models are made by installing a control console onto a base unit. The base units of the appliances are all identical, with the control consoles having different control features, so that different appliance models are made by the different consoles
5 installed on the standardized base units. The console is selected by a purchaser and is mounted by the dealer or retailer or by the manufacturer at a regional warehouse. The appliance can be easily upgraded by removing the first selected console and exchanging for a second selected console having additional control features.
